Applicant, Inventor: Shounosuke, SASADA

[Book Stand]

[Brief Explanation of Drawings]

FIG. 1 is a perspective drawing of one side and

FIG. 2 is a front view of a sleeve form of the current invention

[Utility Model Disposition and Range of Effect]

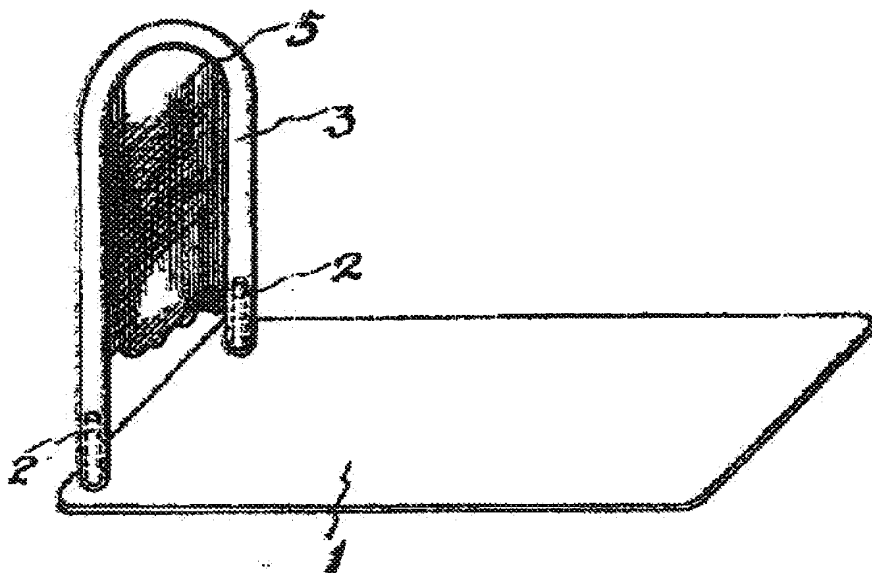

Regarding the drawings, (1) is a thin metal board. (2) are protuberances provided at one end of the metal board. (3) is a circumference frame of a sleeve form made of wood, wire, etc. having a hole (4) in a each leg for joining to the protuberances. (5) is a woven fabric provided in a tensioned state on the circumference frame. However, a book stand is formed using two items as above, but because the other is identical in construction, only the one is shown in the drawings.

Because cloth can be provided in a tensioned state on the sleeve form of the proposed item, the part is useful for women's handicraft teaching materials by application of appropriate pictures or embroidery. Therefore it combines pleasure and practicality, as it is very convenient to remove the sleeve for use due to the simplicity of attaching and removal of the sleeve form and metal board.

[Claims]

As shown in the drawings, a construction for a book stand comprising a cloth (5) provided in a tensioned state on a circumference frame (3) of a sleeve form having holes (4) drilled in an end of both legs of the circumference frame; and a metal board (1) is provided having protuberances in one end for fitting the holes.
